moves last word to top

ie in-place rotation-by-1 ∈ qword array/memory

"store string qword"

```
mov     rsi,rbx        rsi,rdi := rbx
mov     rdi,rbx
.loop:
lodsq   from address ∈ rsi  into rax
        ie rax = [rsi]
xchg    rax,qword [rbx]
stosq   [rdi] := rax
loop    .loop
```

"load string qword" s 4 words s 8 bytes s 64 bits

loop

lodsq: rax = [rsi]

ie

```
while(rcx--)
{
① rax := [rsi]
② rax ↔ [rbx]
③ [rdi] := rax = [rbx]
}
```
