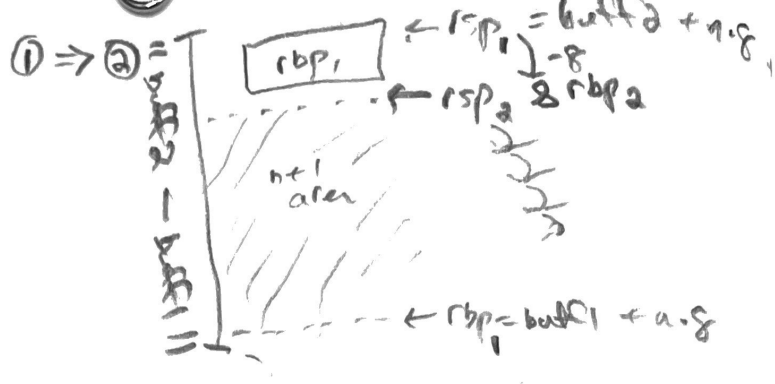
[0x1d]



buffer substack

```
① { mov     rsp,buff2 + n*8 + 8
  { mov     rbp,buff1 + n*8
② enter     0,n+1
```

length of new stack → ||buff1 − buff2||

rbp : usually, "frame ptr" ⟶ beginning of current fcn stack frame

rsp : ⟶ top of current stack

enter 0,n+1 : creates a new stack frame ie (i) push current esp into stack

(ii) sets new ebp := esp

(iii) esp = 0

① { rsp := buff2 + n·8 + 8
  { rbp := buff1 + n·8

②
