! DOES NOTHING !
to rax

$$f(x) \overset{Id}{=\!=} x$$

```
inc     rax
neg     rax
inc     rax
neg     rax
```

~~inc rax~~
~~neg~~
~~inc~~
~~neg~~

<u>note</u>: neg := 2's compl.

inc := inc contents by 1

⇓

BUT still if neg used, contents ∈ rax are 2's-compl.

∴

does nothing — again!
